

Neelkanth Tandel

Frontend Engineer

tandelneelkanth@gmail.com · +91 87809 29208 · Gujarat, India · neelkanthtandel.com · github.com/NeelkanthTandel

Frontend engineer who builds the tools other people work inside. Took Gullynest — a live Bengaluru rental marketplace — from a blank editor to paying users as its only engineer, including the review pipeline its moderators run every listing through. Four years of TypeScript and Next.js, and a daily working relationship with AI coding agents.

SKILLS

- Frontend:** TypeScript, React, Next.js (App Router, Server Components, Server Actions, SSR/ISR), React Native, HTML5/CSS3, Framer Motion
- Tooling for other teams:** content and review pipelines, internal admin portals, marketing sites, analytics instrumentation
- Backend & Data:** PostgreSQL (triggers, RLS, atomic transactions), Supabase (Auth, RLS, Storage, Edge Functions), Node.js, Express, Prisma, GraphQL, REST
- Quality & Delivery:** strict TypeScript, Vitest, Jest, React Testing Library, regression testing, error monitoring, GitHub Actions, Vercel preview deploys, Git
- AI-assisted development:** architecture-first agent workflows, diff review, guardrail design · **Also:** Python, C/C++, MongoDB, Mixpanel, UXCam

EXPERIENCE

Unwrap Labs

Bengaluru

Full-Stack Engineer · Oct 2025 – Present

Gullynest (gullynest.com) — tenant-to-tenant rental marketplace, built 0 → 1 as sole engineer

- Built and launched Gullynest end-to-end in April 2026 — Next.js App Router frontend on Supabase (Postgres, Auth, row-level security, Edge Functions) with a Node/Express + Prisma service layer — as the only engineer on the product.
- Built the review-before-live content pipeline the marketplace runs on — three supply types (tenant handovers, direct owners, RERA-verified agents) moderated by humans, in tooling I built for the reviewers.
- Grew it to **296 live listings and 954 users** across Indiranagar, Bellandur, Whitefield and HSR Layout, closing **10–15 paid move-ins in the last two months**.
- Set schema, module boundaries and data flow up front, then had AI agents implement inside them — reviewing every diff, rewriting overreach; strict TypeScript and Vitest/RTL tests caught generated code at build time, not in production.
- Ran the full delivery loop solo — Vercel preview deploys and production error monitoring — and answered every bug that slipped through with a regression test at the cheapest stage that could catch it.

Core platform

- Designed a blockchain event indexing system that eliminated ~600K daily RPC calls, cutting infrastructure cost ~90%; shipped the rewards dashboard across GraphQL APIs, Next.js and production UI.

Neev Technologies

Seattle, USA (Remote)

Full-Stack Engineer · May 2024 – Sep 2025 · Intern · Dec 2021 – Apr 2024

US wealth-management platform for retail investors.

- Built the admin web portal non-engineering colleagues ran the business through — identity verification, transaction management, analytics — plus the investor mobile app and its App Store releases.
- Built a standalone marketing site to test acquisition funnels, instrumented Mixpanel for lead tracking, and used the funnel data to decide which fixes mattered.
- Automated the withdrawal flow, shipped multi-bank linking and in-app support, and rebuilt the product page with graphs — cutting manual ops work and improving user trust.
- Built the referral system and Hyperverge automated KYC; wrote backend unit tests and triaged bugs from user feedback.

Tvisi

Ahmedabad

Co-Founder · Feb 2024 – Mar 2025

- Designed and built a B2B marketplace connecting Indian farmers to institutional buyers; led development, research and fundraising.

Freelance

Remote · 2021

- Built the Neev mobile app from scratch in React Native + Express and shipped it to the App Store (Stripe/Wyre payments, Plaid, Google/Apple auth); delivered three further React Native apps for Elemzy.

PROJECTS

EkAyana

Team Lead · Sep – Oct 2022

- AKAM / SSIP Hackathon Winner (₹50K)** — led a team building a government meeting-management web app (meetings, attendees, documents, minutes) under contest time limits.

EDUCATION

CHARUSAT — B.Tech, Computer Engineering · CGPA 9.06/10.0

Changa, Gujarat · Oct 2020 – May 2024
