

Neelkanth Tandel

Design Engineer

tandelneelkanth@gmail.com · +91 87809 29208 · Gujarat, India · neelkanthtandel.com · github.com/NeelkanthTandel

Engineer who owns the product, not just the implementation. Built and launched Gullynest — a live Bengaluru rental marketplace — as the only person on it, deciding what to build from direct conversations with tenants and owners. Designed and built Tvisi's B2B marketplace end to end before that. Comfortable designing for a technical audience because I've been one for four years.

SKILLS

- **Product & Design:** product direction, user research and interviews, user flows, information architecture, Figma, prototyping, responsive UI, Framer Motion
- **Engineering:** TypeScript, React, Next.js (App Router, Server Components, SSR/ISR), React Native, Node.js, Express, PostgreSQL, Supabase (Auth, RLS, Edge Functions), Prisma, GraphQL
- **Ways of working:** async and remote, AI-assisted delivery (architecture-first agent workflows, diff review), Vercel preview deploys, error monitoring, GitHub Actions
- **Also:** Python, C/C++, MongoDB, Mixpanel, UXCam

EXPERIENCE

Unwrap Labs

Bengaluru

Full-Stack Engineer · Oct 2025 – Present

Gullynest (gullynest.com) — tenant-to-tenant rental marketplace, taken 0 → 1 as sole engineer

- Took Gullynest from idea to launched product in April 2026 as the only person on it — owning what to build and why, not just how — on Next.js and Supabase.
- Set the roadmap from direct conversations with tenants and owners rather than a spec, rebuilding listing quality, search and the tenant-handover flow around what they actually did.
- Solved the marketplace's core structural problem: three kinds of supply (tenant handovers, direct owners, RERA-verified agents) surfaced in one coherent browsing experience, behind a review-before-live moderation pipeline.
- **296 live listings and 954 users** across four Bengaluru neighbourhoods, closing **10–15 paid move-ins in the last two months** on a 50%-of-one-month's-rent model.
- Moved fast without letting quality slip — Vercel preview deploys, production error monitoring, and a regression test for every bug that reached a user.

Core platform

- Designed a blockchain event indexing system that eliminated ~600K daily RPC calls, cutting infrastructure cost ~90%; shipped the rewards dashboard end-to-end across GraphQL APIs, Next.js frontend and production UI.

Tvisi

Ahmedabad

Co-Founder · Feb 2024 – Mar 2025

- Designed the B2B agricultural marketplace end to end in Figma — user flows, screens and information architecture for two very different audiences, farmers and institutional buyers — then built it.
- Ran customer discovery with farmers and institutional buyers, and led market research, business development and fundraising.

Neev Technologies

Seattle, USA (Remote)

Full-Stack Engineer · May 2024 – Sep 2025 · Intern · Dec 2021 – Apr 2024

US wealth-management platform for retail investors.

- Built and maintained the investor mobile app and admin web portal, owning App Store submissions.
- Rebuilt the product page with graphs, automated the withdrawal flow, and shipped multi-bank linking and in-app support — cutting manual ops work and improving user trust.
- Instrumented Mixpanel and UXCam across web and mobile, then used funnel and session data to decide which fixes actually mattered.

Freelance

Remote · 2021

- Built the Neev mobile app from scratch in React Native with an Express backend and shipped it to the App Store — Stripe and Wyre payments, Plaid bank linking, Google/Apple auth; delivered three further React Native apps for Elemzy.

PROJECTS

EkAyana

Team Lead · Sep – Oct 2022

- **AKAM / SSIP Hackathon Winner (₹50K)** — designed the flows and interface and led a team building a government meeting-management web app (meetings, attendees, documents, minutes) under contest time limits.

EDUCATION

CHARUSAT — B.Tech, Computer Engineering · CGPA 9.06/10.0

Changa, Gujarat · Oct 2020 – May 2024
